Exp 9 Compliance Assessments - Test of Design and Test of Operational Effectiveness

Aim

To evaluate a compliance requirement in Eramba through Test of Design (ToD) and Test of Operational
Effectiveness (ToOE), while connecting the assessment to supporting controls, policies, and business risks.

Procedure

1. Open Compliance Management → Compliance Packages.
2. Create the AsterByte Security Compliance Review package and add a compliance requirement for accessauthentication.
3. Open Compliance Management → Compliance Analysis and select the created requirement.
4. Set the compliance strategy to Compliant and assign the responsible owner.
5. Link the relevant internal control, policy, and Cloud Service Availability Risk.
6. Document the Test of Design to confirm that the requirement is formally defined.
7. Document the Test of Operational Effectiveness to confirm that the related control operates and supportingevidence is available.
8. Save the assessment and review the resulting compliance information.

Output

A compliance requirement was assessed with a compliance strategy, owner, supporting GRC relationships, and documented ToD and ToOE checks.

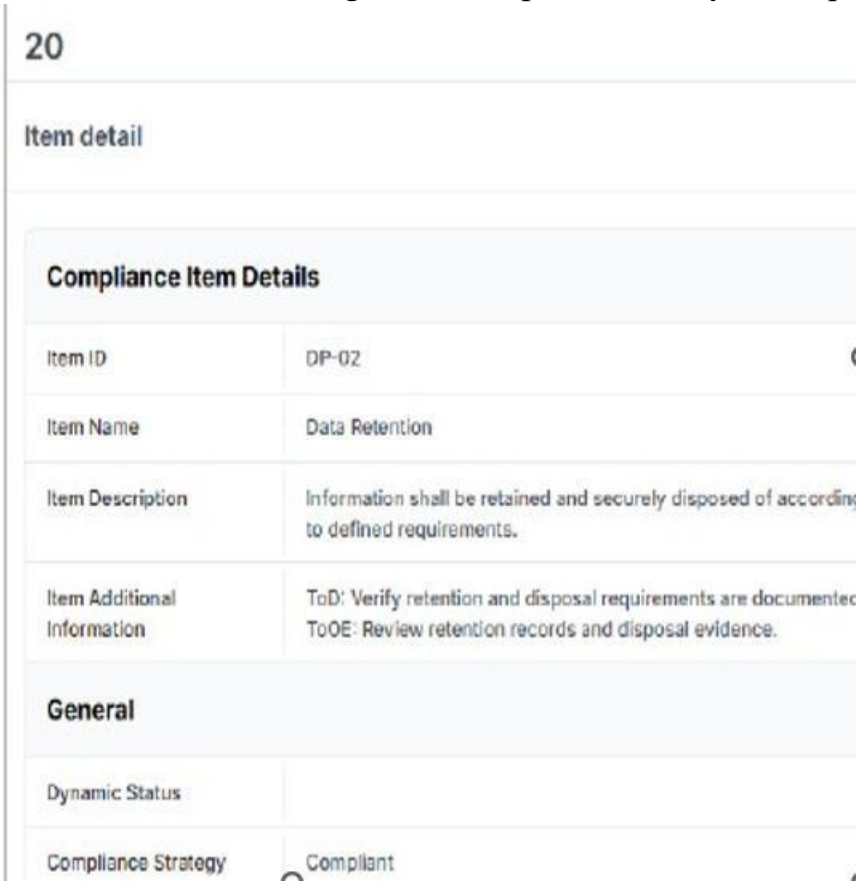

Fig 9.2 - Compliance Requirement Details

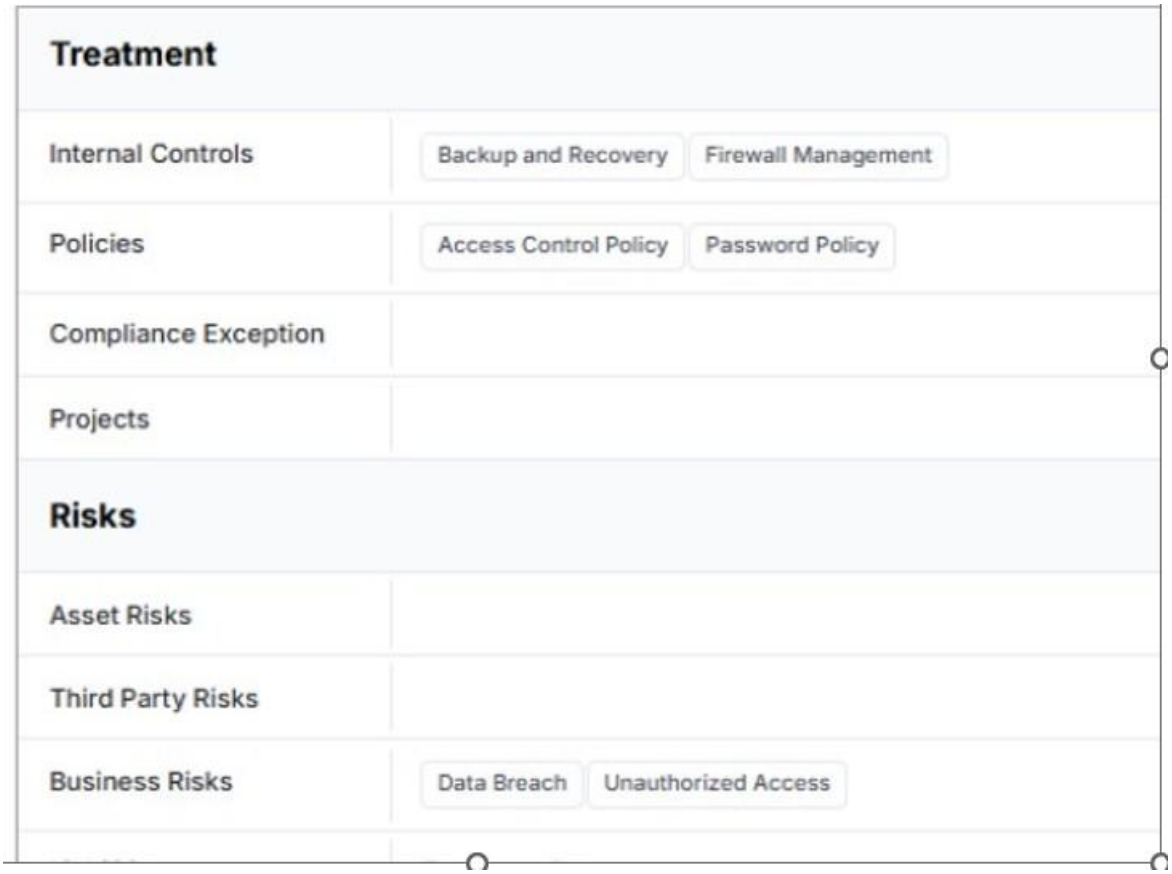

Fig 9.3 - Treatment and Risk Relationships

Result

The compliance assessment workflow was successfully configured in Eramba. The requirement can be evaluated for both design adequacy and operating effectiveness while remaining linked to supporting GRC records.
